

# Cookies and Browser Storage Policy

This policy explains the cookies and similar browser-storage technologies used by the current Averisk website.

|                |                                                                              |
|----------------|------------------------------------------------------------------------------|
| Effective date | 2 September 2026                                                             |

**Current configuration in one sentence:** the website code currently sets no HTTP cookies and loads no analytics or marketing trackers; it uses one first-party `localStorage` record to remember your privacy preference.

## 1. Cookies and similar technologies

A cookie is a small data file stored by a website in a browser. Websites can also use other browser-storage technologies, including `localStorage`. EU rules concerning storage on or access to a user's device can apply to cookies and to similar technologies.

## 2. What the Averisk website currently uses

| NAME / KEY                  | TECHNOLOGY                                    | PROVIDER        | PURPOSE                                                                                                                                        | DURATION                                                                                                                                                |
|-----------------------------|-----------------------------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>averiskConsent</code> | First-party browser <code>localStorage</code> | Averisk website | Remembers the privacy-preference version, necessary-storage status, optional analytics/marketing preference values and the time of the choice. | Treated by the website as valid for 180 days. When it is older than 180 days, the site asks again and the next saved choice overwrites the prior value. |

## 3. Does the website use analytics or marketing cookies?

**No.** The current website code does not load an analytics platform, advertising service, behavioural profiling tool, marketing pixel or social-media tracker. The privacy interface contains analytics and marketing preference controls, but those preferences do not currently activate any external service or tracking script.

If an optional analytics or marketing technology is introduced in the future, Averisk will update the site configuration and this policy as appropriate, and will obtain prior consent where required before activating the relevant technology. A new consent version should be used so previous choices are not silently reused for materially new purposes.

## 4. Why is browser storage used?

The `averiskConsent` value exists so the website can remember that you have already made a privacy choice and avoid showing the preference dialog on every page load. It does not intentionally contain your name, email address, account identifier or other content supplied by you.

The value remains in your own browser storage. The current website JavaScript reads it locally and does not intentionally send the stored preference object back to Averisk.

## 5. Consent and strictly necessary storage

EU guidance distinguishes optional tracking technologies from storage that is strictly necessary to provide a service or remember a user's requested preference. Strictly necessary storage generally does not require prior consent, although visitors should still be informed about its use. Optional analytics and marketing technologies generally require consent before activation.

The current Averisk site uses the browser preference record only for preference management. No optional tracker is presently activated.

## 6. How to change or remove your preference

You can reopen the privacy interface using the **Cookie settings** link in the website footer. You can also remove the stored preference by clearing site data or local storage for **averisk.net** in your browser settings. After the stored preference is removed, the website will ask for a new choice on the next visit.

## 7. Third-party services

The current page code does not contact a third-party font provider, analytics provider or advertising network. Fonts are selected from local/system font stacks on the visitor's device. Website delivery itself may be provided through hosting and content-delivery infrastructure such as Amazon Web Services (AWS); ordinary network requests required to deliver the page are not browser cookies set by the Averisk page code.

## 8. Changes to this policy

This policy is intended to describe the website's actual current storage behavior. It will be updated if the site begins using additional cookies, analytics, advertising, embedded third-party services or other browser-storage technologies.

## 9. Contact

Questions about this policy can be sent to **info@averisk.net**.
